

Catch::Generators::
MapGenerator::next

Catch::Optional::operator=

Catch::Optional::operator=

Catch::Optional::operator=

Catch::Optional::operator=

Catch::Optional::~~Optional

Catch::Optional::reset

```
graph LR; A[Catch::Generators::MapGenerator::next] --> F[Catch::Optional::reset]; B[Catch::Optional::operator=] --> F; C[Catch::Optional::operator=] --> F; D[Catch::Optional::operator=] --> F; E[Catch::Optional::operator=] --> F; G[Catch::Optional::~~Optional] --> F;
```

The diagram illustrates a control flow or dependency structure. On the left, there are six rectangular boxes, each containing a C++-style identifier. These boxes are arranged vertically. On the right, there is a single, wider rectangular box, shaded gray, which serves as the destination for all arrows. Six blue arrows originate from the left boxes and point towards the right box. The arrows from the first four boxes (all labeled 'Catch::Optional::operator=') are relatively straight. The arrow from the top box ('Catch::Generators::MapGenerator::next') curves downwards. The arrow from the bottom box ('Catch::Optional::~~Optional') curves upwards. All arrows converge on the 'Catch::Optional::reset' box.
