

Catch::RunContext::
handleExpr

```
graph LR; A[Catch::RunContext::handleExpr] --> B[Catch::ITransientExpression::getResult]; A --> C[Catch::isFalseTest];
```

The diagram illustrates a control flow from a function in the `Catch::RunContext` namespace to two other functions. The source function, `Catch::RunContext::handleExpr`, is highlighted with a grey background. Two blue arrows originate from its right side: one points to `Catch::ITransientExpression::getResult` and the other points to `Catch::isFalseTest`. Both target functions are in white boxes.

Catch::ITransientExpression
::getResult

Catch::isFalseTest
