

Catch::XmlReporter
::assertionEnded

Catch::XmlReporter
::sectionStarting

Catch::XmlReporter
::testCaseStarting

Catch::XmlReporter
::writeSourceInfo

```
graph LR; A[Catch::XmlReporter::assertionEnded] --> D[Catch::XmlReporter::writeSourceInfo]; B[Catch::XmlReporter::sectionStarting] --> D; C[Catch::XmlReporter::testCaseStarting] --> D;
```

The diagram illustrates three separate method calls on the left, each represented by a white box with a black border. These boxes are arranged vertically. From the right side of each box, a blue arrow points towards a single, larger gray box on the right. The gray box represents the target method, `Catch::XmlReporter::writeSourceInfo`. The arrows indicate that the `assertionEnded`, `sectionStarting`, and `testCaseStarting` methods all invoke the `writeSourceInfo` method.
