

Catch::uniform_floating
_point_distribution::uniform
_floating_point_distribution

```
graph LR; A[Catch::uniform_floating_point_distribution::uniform_floating_point_distribution] --> B[Catch::uniform_floating_point_distribution::a]; A --> C[Catch::uniform_floating_point_distribution::b];
```

The diagram illustrates a C++ class hierarchy. A gray box on the left represents the base class `Catch::uniform_floating_point_distribution::uniform_floating_point_distribution`. Two blue arrows point from the right side of this box to two white boxes on the right. The top white box represents the derived class `Catch::uniform_floating_point_distribution::a`, and the bottom white box represents the derived class `Catch::uniform_floating_point_distribution::b`.
