

Catch::Matchers::StringContains
Matcher::match

Catch::WildcardPattern
::matches

Catch::contains

```
graph LR; A["Catch::Matchers::StringContains<br/>Matcher::match"] --> C["Catch::contains"]; B["Catch::WildcardPattern<br/>::matches"] --> C;
```

The diagram illustrates a mapping from two specific matcher methods to a general 'contains' function. On the left, there are two white rectangular boxes. The top box contains the text 'Catch::Matchers::StringContains' followed by 'Matcher::match' on a new line. The bottom box contains 'Catch::WildcardPattern' followed by '::matches' on a new line. On the right, there is a gray rectangular box containing the text 'Catch::contains'. Two blue arrows originate from the right side of the two white boxes and point towards the left side of the gray box, indicating that both 'match' and 'matches' methods are mapped to the 'contains' function.
